Blockchain: Solana

Launch: April 27, 2026

Abstract

\$PEACE is a community-driven cryptocurrency designed to align economic incentives with global humanitarian impact. Built on Solana, it introduces a framework called *Peace Economics*, where value creation is directly linked to measurable contributions toward peace, aid, and collective well-being.

1. Introduction

The global system is increasingly fragmented. Economic inequality, geopolitical conflict, and declining institutional trust highlight the need for new coordination mechanisms.

Blockchain enables trustless coordination. \$PEACE applies this capability toward humanitarian alignment.

2. Problem Statement

Current systems exhibit three core failures:

- Misaligned incentives (profit over well-being)

- Lack of transparency in aid distribution
- Limited global coordination mechanisms

Cryptocurrency markets further amplify speculation without necessarily contributing to real-world impact.

3. Proposed Solution

\$PEACE introduces a model where:

- Capital flows are traceable on-chain
- Community governance directs resource allocation
- Incentives reward participation in peace-building activities

This model is referred to as **Peace Economics**.

4. System Architecture

4.1 Blockchain Layer

\$PEACE is deployed on Solana for high throughput and low transaction costs.

4.2 Smart Contract Design

Core functionalities include:

- Token minting and fixed supply enforcement
- Allocation tracking
- Future DAO governance hooks

4.3 Data Transparency

All transactions and fund allocations are publicly verifiable on-chain.

5. Tokenomics

Total Supply: 1,000,000,000 \$PEACE

5.1 Distribution

- Community Fund — 40%
- Ecosystem Rewards — 30%
- Foundation — 20%
- Team — 10% (4-year vesting)

5.2 Economic Model

\$PEACE operates as a non-inflationary asset with long-term alignment incentives.

6. Utility

- Funding humanitarian initiatives
- Governance participation (DAO)
- Ecosystem incentives
- Awareness and community expansion

7. Governance

Future governance will be executed via a decentralized autonomous organization (DAO), enabling token holders to propose and vote on initiatives.

8. Roadmap

Phase 1 — Awakening Community formation and initial distribution

Phase 2 — Foundation Token launch and liquidity setup

Phase 3 — Expansion Global adoption and partnerships

Phase 4 — Evolution DAO governance and scaling impact

9. Security and Transparency

- Public on-chain verification
- Smart contract audits (planned)
- Transparent fund allocation

10. Risks

- Market volatility
- Regulatory uncertainty
- Execution risk
- Smart contract vulnerabilities

11. Conclusion

\$PEACE represents an attempt to align decentralized finance with global humanitarian goals.

Its success depends entirely on community participation, transparency, and real-world execution.
